## Single Point of Contact

J2K Technology is a company that was developed to help our customers by playing an advisory role as a single point of contact. We help our customers by offering best of breed products and solutions and taking them through a proven manageable sales process.

Our main focus is to eliminate the need to deal with 30 different vendors to solve 5 different problems. Our intention is to manage the entire process, not just a single deal, by offering a wide variety of solutions under 5 major categories. Security, Enterprise Scheduling, Messaging, Network and Storage with managed services to implement and maintain these areas.

### J2K Technology, Inc.

*Single Point of Contact.*

**Tel:** 516-488-7625

---

**Application Security** - We can provide web application layer security as well as 3rd party networks, application or database assessment. We have a way you can ensure your developers write secure code and that once the applications are in production, they are protected in a proactive manner, blocking all types of application layer attacks. The solution provides two options: either a web application intrusion detection system or a web application firewall.

**Firewall Technology** - We can provide the following solutions: CheckPoint on Nokia, Cisco Pix. as well as NetScreen.

**Managed Services** - We work with NetSEC, one of the top managed services organizations. We can monitor and manage your current or future IDS and Firewall initiatives. We can also do wireless assessments, wireless intrusion detection, wireless vulnerability assessments and vulnerability and patch advisory services.

**IDS Solutions** - We have formal relationships with Enterasys which is the Dragon solution for both network and host base intrusion detection. In addition, we also have sourcefire as one of our best of breed partners which is a solution that's new to the market formerly known as snort. Other IDS solutions include NFR and ISS, Cisco's Secure IDS (formerly NetRanger) and Symantec tool sets.

**Denial of Service Detection and Protection** - We have a non-intrusive, Non-signature based solution from Arbor Networks, a Cisco funded company, that can detect and protect organizations from a distributed denial of service attack in real time. We

can also provide real time analysis of your traffic, coming and going.

**Email Filtering/Virus Protection** - Our technology provides proactive, multi-tiered, Internet content security from the gateway to the desktop, protecting the entire enterprise from malicious code that destroys or steals digital assets, inappropriate and nonproductive material, the misuse of company resources and Internet-borne content.

**Email Security** - We partner with a company called CipherTrust. They specialize in email security: Anti-Spam, Email anti virus, Email firewall, Email IDS, Email VPN and Content Filtering.

**Smart Cards and Tokens** - We have a formal relationship to provide RSA technology as part of our offering.

**Security Log Consolidation** - Our relationships with Intellitactics, Guarded.net and Pentasafe allow us to integrate with and monitor hundreds of security devices in real time, looks for patterns of suspicious activity and provides instant analysis and strategies for protecting the information on corporate networks.

**Symantec Security Tool Set** - We are a software reseller for Symantec and their security tool set.

**Internet Access Monitoring** - any organization can build a positive, productive Web culture and be protected from the problems associated with uncontrolled Web access.

**Physical Security** - We provide industry leading multi-biometrics security, ranging from fingerprint scanners, facial scanners, and facial recognition.

**Exchange Administration** - We also offer automated solutions for Microsoft Exchange to help

with the repetitive tasks associated with administration. We also offer a solution to help with the move from 5.5 to 2000.

**Messaging** - We offer a secure instant messaging solution along with LDAP customization in an appliance. With LDAP we offer mentoring to technology groups as well.

**Network Products and Services** - We specialize in the following areas: Systems Administration, Help Desk, Network Design and Installation, Network Management, Network and Telecommunications Support, Network Solutions, Maintenance, Remote Network Administration and Diagnostics, and also Training.

**Enterprise Job Scheduling** - We offer a unique and more cooperative architecture for job scheduling, designed to schedule across multiple platforms. We have a solution that would eliminate the master-agent technology.

**Professional Product Offerings and Services** - Our services vary in many different ways and we can offer a large variety of value added services, such as: Web Application Penetration Testing, Network Infrastructure Assessments, as well as Wireless Assessments. Other specialties include Messaging Design, Server Infrastructure Hardening, Thin Client Design, Disaster Recovery, High Availability Systems and Storage Planning and Design, SAN Management, Server and Storage Consolidation, CheckPoint Training and Certification, Secure Coding Classes, Implementation and Training.
